---

## Profile Summary

Electronics and Communication Engineering graduate with a strong foundation in digital electronics, embedded systems, and communication concepts. Hands-on experience in microcontroller-based projects, sensor interfacing, and basic IoT applications. Proficient in C, Embedded C, and Python, with a keen interest in VLSI, embedded systems, and core electronics roles. A quick learner with good problem-solving and teamwork skills

---

## Technical Skills

- **Programming Languages:** Python , Java, C Programming, VLSI (basics)
  - **Python Libraries:** Pandas, NumPy, Matplotlib
  - **Databases:** SQL, MYSQL
  - **Core Concepts:** Analog and Digital Communication Systems
- 

## Projects

### Smart LED Cricket Stumps using Sensors

**Role:** Embedded Systems Developer (Academic Project)

Description:

Designed and developed Smart LED Cricket Stumps that automatically light up when the wicket is hit, simulating modern cricket decision systems.

Used impact/vibration sensors to detect contact between ball and stumps.

### Technologies & Components:

Arduino Uno

Vibration / Piezo Sensor

High-brightness LEDs

Transistor & Resistors

Battery Pack

Embedded C

### Outcome:

Successfully demonstrated accurate wicket detection with instant LED illumination.

---

## Education

B.Tech. in Electronic and Communication Engineering | Dadi institute of engineering technology  
| Ankapalli, Andhra pradesh | CGPA: 8.1

Diploma in G P W Nandigama | Vijaywada | CGPA:7.4

Board of Secondary Education | A P M S | Manchala | marks:555 |

---

## Industrial Training:

### Intern- SMT

#### Internship Objective

The objective of this internship is to gain practical knowledge of SMT PCB boards, including SMD component identification, PCB assembly process, soldering techniques, inspection, and testing, as followed in the electronics manufacturing industry.

#### Internship Description

During this internship, training was provided on Surface Mount Technology (SMT) used for manufacturing modern electronic circuits. The internship covered the complete lifecycle of an SMT PCB board, starting from basic design concepts to final testing and quality inspection.

---

## Achievements & Certifications

- **Certification:** Advanced Embedded System Developer Virtual Internship - issued by Microchip Sep 2025 | Process Mining Virtual Internship - issued by,Celonis Dec 2024
  - **Soft Skills Highlight:** Easy to able and understanding
- 

**Languages:** English, Telugu, Hindi (Optional)
